Meetings

Artur | July 17, 2019

Assumptions:

- The host is a Viewer
- A meeting can have multiple recordings
- I could differentiate between public recordings and private recordings or viewers and hosts. However they behaviour is the same.
- Password is replicated in the meeting and the recording, the other way would be to use the meeting password to acess the record.

Meeting

+ id:int
- password:string

Recording

+ url:string
- password:string
+ isPrivate:bool

Viewer

+ id:int
+ email:string
+ isHost:bool
